North Cyprus Companies

Service Providers

Welcome to our classified section where we hope to eventually put together a full directory of Northern Cyprus companies and service providers, this I am sure would be useful to our visitors when trying to find out where they can purchase products or services in Northern Cyprus.

But

We dont want this area to be just another area of ads, so wherever possible we will try to add some informative content about North Cyprus. And with any company advertising with us, if it is possible for them, we will ask them to do the same.

So Lets get startedHeating

North Cyprus Heating Anyone who hasn't experienced a Northern Cyprus winter may think we have all gone mad!

It would seem that way, we are at the end of August and todays temperature is 35C 95F

But

Winters although mild and luckily short lived can feel very different when you live here. It can feel very cold and damp for a month or two. The evenings especially do get chilly from late October to Mid May and with this in mind, every home does need some form of heating, whether its an open fire, wood burning stove or central heating.

For information on North Cyprus suppliers of Hunter Stoves

[Click here](#)About Hunter Stoves

The Herald HUNTER 6, 8 and 14 Multi &ndash; Fuel Airwash Stoves

The Hunter Herald range of multi-fuel stoves have been creatively designed to combine the latest in stove technology with traditional good looks and values.

Features

Value For Money

All Hunter Herald stoves are manufactured from high quality 5mm thick steel to the exacting standards of BS3378 with quality cast iron components, representing excellent value for money.

The Herald Airwash

The &lsquo;airwash&rsquo; is achieved by very hot air being directed down behind the large glass doors creating a screen between the fire and the glass. Smoke or combustion particles do not come into contact with the glass leaving it clean to see through.

From Wood to Solid &ndash; Fuel with a Single Turn of the Handle

A cleverly designed integral grate with external &lsquo;riddling&rsquo; adjustment tool means the Herald can be changed from wood setting to multi-fuel by a single turn of the handle.

Safe and Efficient for Over &ndash; Night Burning

By reducing the air inflow to an absolute minimum, the fire will gently smoulder and remain alight throughout the night. When required, the fire will come to life by simply increasing the air flow into the stove.

Controlled Air Movement for Optimum Solid Fuel Burning

When burning coal and for easy lighting of the stove, air can be directed under the open grate and into the heart of the fire. This provides the optimum conditions for this type of fuel.

### Controlled Air Movement for Optimum Woodburning

For wood burning air is directed into the top of the stove and heated in an air chamber before being 'airwashed' down inside the doors and into the heart of the wood fire. This is essential for efficient woodburning giving complete combustion and helps to keep the chimney clean.

When woodburning the grate is changed to the closed wood position which creates a flat base to ensure a deep bed of ash is allowed to build up.

### A Dust & Free, Safe and Easy Riddling System

By simply moving the riddling tool up and down &dash; which moves the grate open and closed &dash; the Herald riddles safely with the minimum of effort. This is undertaken with the doors closed and is completely dust &dash; free.
